If I use it like this <pre>addRoute(pattern="contactus", handler = "ehPages", action="dspStatic", matchVariables="pagename=contactus")</pre> It doesnt recognize the pagename variable from the request scope. However, this works. <pre>addRoute(pattern="contactus", handler = "ehPages", action="dspStatic", pagename="contactus")</pre> So is this how its supposed to be or is this a typo in the documentation? Please advise. <p style="text-align: right;"><a href="#">Link</a>   <a href="#">Top</a>   <a href="#">Bottom</a></p>
